Need to transcribe and analyze that important meeting recording? Looking to extract insights from lecture captures? Want to turn voice memos into actionable knowledge? Hedy's new audio and video import feature has you covered.

Your Personal AI Analysis Assistant for Any Recording

Today, we're excited to announce that Hedy Pro users can now import audio and video files directly into the app, transforming any recording into a fully analyzed Hedy session. This powerful new capability brings Hedy's AI-powered analysis to your entire library of recorded content.

"This feature fundamentally changes how professionals can work with their recorded content," says Julian Pscheid, founder of Hedy AI. "Whether you're reviewing client meetings, studying recorded lectures, or processing voice memos, Hedy now helps you extract maximum value from any recording."

More Than Just Transcription

While many tools simply convert speech to text, Hedy's import feature delivers the full power of our AI analysis suite:

• Accurate Transcription : Crystal-clear transcripts with speaker detection
• Smart Summaries : Concise overviews of key discussion points
• Action Items : Automatically extracted next steps and deliverables
• Interactive Chat : Ask questions about your recording's content
• Highlights : Mark and analyze important moments
• Detailed Notes : Comprehensive documentation of your content

Perfect For Every Professional

Business Leaders

• Transform recorded client meetings into searchable knowledge
• Extract action items from team discussions
• Create detailed meeting minutes automatically

Students & Educators

• Convert lecture recordings into structured study materials
• Generate comprehensive notes from recorded sessions
• Review and analyze class discussions

Researchers

• Turn interview recordings into analyzed data
• Generate transcripts with preserved academic accuracy
• Extract insights from recorded discussions

Content Creators

• Convert podcast recordings into written content
• Generate show notes automatically
• Create searchable archives of your content

Getting Started is Easy

Import your files in two simple ways:

1. Share Directly : Send files to Hedy from any app using your device's share menu
2. Import in App : Upload files directly through Hedy's session history screen

Hedy supports all common audio formats (MP3, WAV, M4A, AAC, OGG, FLAC, WMA) and video formats (MP4, MKV, AVI, MOV, WEBM, 3GP, WMV), ensuring compatibility with your existing recordings.

Privacy First

Just like with live sessions, transcription happens right on your device, and your audio files never leave your phone. In the default cloud mode the resulting transcript is analyzed in the cloud (transient, never stored); on capable hardware, Local AI Processing keeps that analysis on-device too, so your sensitive conversations stay private.

Available Now for Pro Users

The audio and video import feature is available today for all Hedy Pro subscribers. Simply update to the latest version of Hedy and start transforming your recordings into intelligent, actionable insights.

Ready to unlock the knowledge hidden in your recordings? Download Hedy (https://get.hedy.bot/) today and experience the future of audio analysis.
